# 6/13/2024 Log

## Summary

- Today I continued my work on the presentations and should have it ready for next week.

- I got my idc script to work in ida. I am going to do more work to get it to be more readible.

- I was able to get my script to split up the data array into the format I want it in. By doing this I found out that some of the things that I assumed are no longer true.

- I was investigating the rcx call which loads me into another hidden function.

- Not sure what this does, it seems I can only analyze it correctly during runtime.

- I think I will also attempt to do pixel poker and go between the two challenges when I get stuck.
